

3rd Quarter Clean Air Act Report

April 2014- June 2014

Walker River Paiute Tribe

Submitted by

Corey Tom, Air Quality Technician

Ambient Air Monitoring:

One continuous monitor, a Teom PM10 (an EPA approved equivalent Monitor) collects data in real time and near real time. The air monitor and a PSD meteorological station feed data through a ZENO data logger using the LEADS Software System. Data is presently transmitted wirelessly via satellite and hosted on servers (Tribal Environmental Exchange Network- TREX) located at the Tribes contractor IPS MeteoStar, in Texas. Throughout this Quarter I have been plagued by personal health problems. The PM10 monitor has been up and running and giving good data. During my medical leave I would come and check how the monitor was performing and do routine maintenance.

Meteorological Monitoring:

Meteorological data and air monitoring data are available for the public to view on the IPS MeteoStar TREX web site. Our own Tribal web site is down and has been so for a long time. So I direct interested parties to the IPS site or tell them myself the condition our air is in.

Community Education/Outreach:

I was not able to perform any Education or Outreach this Quarter due to being on medical leave.

Travel/Training – Meetings:

Due to being on Medical leave I was unable to attend any trainings or meetings.

Administrative:

Out on Medical leave from March 28th 2014-June 2nd 2014.

Respectfully,

Corey Tom, Air Quality Technician
